JPMixer

BROWSER-BASED MONITOR MIX CONTROL FOR DIGICO CONSOLES

Mac & Windows

Give Every Musician Control of Their Own Mix — From Their Phone

JPMixer connects to your DiGiCo console and lets musicians dial in their own in-ear monitor or wedge mix in real time from any smartphone, tablet, or laptop. No extra hardware. No app to download. Just WiFi and a browser.

FOR THE ENGINEER

Real-Time Fader Control

Every aux send level goes directly to the DiGiCo console via OSC with no noticeable lag.

Monitor Engineer View

Full-screen grid of every aux mix side by side — all channels, all faders, fully interactive.

Ear Scene Recall

Save a full mix per DiGiCo snapshot. Mixes push automatically when the snapshot fires — no action needed during the show.

Console Controller

Full input strip faders, control groups, and aux output masters — controllable from any browser on the network.

My Mixes & Built-In EQ

Performers save personal named mixes anytime, and shape their own tone with an 8-band aux EQ — all from their phone.

Live Devices View

See every connected musician's device at a glance — which mix they've picked, a live activity light, and connection status.

iPad OSC Relay

Forwards DiGiCo OSC to iPads running external control apps alongside JPMixer.

System Requirements

DiGiCo SD or Quantum console with OSC / DiGiCo Pad external control enabled

Mac or Windows computer on the same network as the console

Any phone, tablet, or laptop with a browser

FOR THE MUSICIANS

WHAT MUSICIANS CAN DO FROM THEIR PHONE

- Adjust any channel in their personal mix in real time
- Mute or solo individual channels without affecting anyone else
- Control left/right pan for stereo IEM users
- Save their mix for each song — recalls automatically during the show
- Save personal named mixes anytime with My Mixes, and shape their own tone with built-in EQ
- Add to iPhone home screen — works like a native app, stays connected when screen locks
- No app download, no account, no setup — just open a link

HOW IT WORKS

1. **Install JPMixer on your Mac or Windows computer**
   The app runs quietly in the menu bar or system tray and starts a local web server automatically.
2. **Enter your DiGiCo console's IP and OSC ports**
   JPMixer connects to the console and reads all channel names, aux counts, and current levels.
3. **Share the link with your musicians**
   They open it in Safari or Chrome on their phone — no login, no download. Their mix is live instantly.
